

Blinkit Sales Dashboard Report

Blinkit Grocery Sales Dashboard using MS Excel

Introduction

The Blinkit Sales Dashboard is an interactive business intelligence project developed using Power BI. The dashboard provides insights into sales performance, outlet performance, product categories, customer ratings, and outlet distribution. It helps businesses make data-driven decisions by presenting key metrics and trends in an easy-to-understand format.

Objective

The main objectives of this project are:

- Analyze overall sales performance.
- Compare sales across different outlet locations and sizes.
- Identify top-selling product categories.
- Monitor customer ratings and average sales.
- Build an interactive dashboard for business decision-making.

Dataset

- **Dataset Name:** Blinkit Grocery Sales Dataset
- **Source:** Kaggle
- **Format:** Microsoft Excel (.csv)

Tools & Technologies

- Microsoft Excel
- Power Pivot
- Pivot Tables
- Pivot Charts

Project Workflow

1. Data Collection

- Downloaded the Blinkit Grocery Sales dataset from Kaggle.
- Imported the dataset into Microsoft Excel.

2. Data Cleaning

- Removed duplicate records.
- Handled missing values.
- Corrected inconsistent data entries.
- Standardized column names and data formats.

3. Data Preprocessing

- Transformed the dataset using Power Query.
- Created calculated columns and Pivot Table.
- Optimized the data model for reporting.

4. Data Visualization

Designed an interactive Power BI dashboard with:

- **KPI Cards**
 - Total Sales
 - Average Sales
 - Number of Items
 - Average Rating
- Sales Trend by Outlet Establishment Year
- Fat Content Analysis
- Item Type Analysis
- Outlet Size Distribution
- Outlet Location Analysis
- Outlet Type Performance
- Interactive slicers for Outlet Size, Outlet Location, and Item Type.

Dashboard KPIs

- **Total Sales:** \$1.20M
- **Average Sales:** \$141
- **Number of Items:** 8,523
- **Average Rating:** 4.0

Key Insights

- Medium-sized outlets generated the highest sales.
- Tier 3 outlets contributed the largest share of total sales.
- Fruits & Vegetables and Snack Foods were the best-selling categories.
- Low Fat products generated more sales than Regular products.
- Customer ratings remained consistently high, with an average rating of 4.0.

Conclusion

The Blinkit Sales Dashboard provides a comprehensive view of grocery sales performance. By using Power BI's interactive features, users can quickly identify trends, compare outlet performance, and make informed business decisions. This project demonstrates practical skills in data cleaning, data transformation, visualization, and business analytics.

Future Enhancements

- Add profit and margin analysis.
- Include monthly and yearly sales forecasting.
- Integrate real-time data refresh.
- Improve mobile dashboard responsiveness.
- Add customer segmentation and regional analysis.
